Specialist
Network Services

Ensuring network performance and availability to support the modern digital enterprise

Logicalis is an award-winning Network Services provider, offering a full range of expert network services that deliver secure, modern, high-speed network solutions to support digital transformation.

With broad expertise and in-depth knowledge of specialist IT and networking solutions, Logicalis provides network services that can support the digital business outcomes of a modern organisation. From initial assessment to design and deployment, followed by ongoing monitoring, management, and support, we provide expert services across the full network lifecycle.

Organisations of all types are embracing a digital transformation strategy and they share a theme: drive greater customer satisfaction, transform business models, and empower workforce innovation. Yet businesses are struggling to provide the best experiences they possibly can because network complexity is holding them back.

As a certified Cisco Gold Partner, Logicalis are working with our customers every day to transform organisations networks and enhance insights to improve operational efficiency - securely and confidently.

Delivering Network Assurance with Logicalis

Backed by a team of experts and working with some of the World's leading technology providers, Logicalis brings together networking services and technology capabilities to deliver the key attributes of an open network, that predicts, adapts, and protects your business.

Agility

Deliver greater operational efficiency and make your bandwidth work for you by deploying software-defined networking - without compromising the application experience. The benefit is ongoing innovation, updates, and upgrades.

Security

Embed security capabilities into the very fabric of the network, allowing it to be inherently secure "by design".

Observability

Understand who, what, when, where, and how network traffic is flowing. Embed analytical capabilities and use the insights they provide to improve the performance of business-critical applications and accelerate problem resolution.

Your network is at the heart of your business, but in order for it to be able to function properly, it needs the right support. Whatever challenges your organisation is facing, our customer-first approach means we can help you to solve them through provision of in-depth advice, personalised recommendations, proven methodologies, and networking services tailored to your needs.

- Campus Networks
- Data Centre Networks
- Wide Area Networks

Delivering modern network solutions to create a digital future

From advisory services, design, and implementation, to migration, optimisation, and managed support, Logicalis specialises in a range of robust Networking Services tailored to fit your specific requirements.

Regardless of where you are in the infrastructure lifecycle, our Networking Services operate all segments of the network, including campus, data centre, and wide area network, with access to a team of certified specialists to improve IT efficiencies and deliver optimal network performance across your enterprise.

Wide Area Networks

Software-Defined Wide Area Networking (SD-WAN) employs policy based logical overlays utilising any available connectivity, making it more reliable and ensuring optimal performance for your organisation.

Build modern IT environments and enhance agility with advisory services for resilient, adaptive, and transformative IT.

Enjoy the flexibility of a secure, agile WAN architecture, optimised for multi-cloud connectivity through the following services:

- WAN Traffic Optimisation
- Site to site connectivity
- Enterprise Class TeleWorker
- Cloud on-ramp
- Direct Internet Access (DIA)

Campus Networks

Campus networks provide connectivity for users and things within a local area network (LAN) or a set of interconnected LAN's serving a corporation, government agency, university or similar.

Take advantage of best practice recommendations and leverage innovative solutions for increased productivity to provide a secure foundation that scales with business needs.

Whether you need an overview of modern campus technologies or are seeking to pinpoint areas to deliver better performance and improve customer/user experience, Logicalis can address the opportunities and challenges of your network infrastructure.

- SD-LAN
- Wired and Wireless
- Private 5G
- Network Security
- Network Observability

Specialist Networking Services

With Logicalis Specialist Network Services, we provide digital connectivity across the three key networking domains of Campus, Datacentre and Wide Area Network that's right for your business today and tomorrow.

From strategy and assessments to design, implement and operate, and to ongoing monitoring and managed services, we bring technology together that is simple, intelligent, automated and highly secure.

We will work with you to provide a Networking service that's tailored to suit your business needs and budget. This is backed with the confidence that you'll be working with certified specialists delivering proven methods to help customers maximise their investment and leverage the network to drive use cases such as IOT, programmability and sustainability, with less risk.

- Network Architecture Design
- Network Health Check
- Implementation & Migration Services
- LAN, WAN, & WiFi Surveys
- Network Lifecycle Services
- Tailored Support Services
- 24x7 Managed Services
- Software Defined Networking
- Network Security
- Network Observability
- Project Management

Data Centre Networks

Modern software-defined data centre networks deliver low latency secure connectivity between multiple service tiers within data centres enabling intelligent and intuitive policy-based automation, orchestration, and micro-segmentation down to the virtual machine or container.

With cloud networking, your data, workloads, and apps stay connected for exceptional efficiency across hybrid cloud, multi-cloud, data centre and edge.

Stay in control with network automation, real-time visibility, and simplified operations through the following services:

- Hybrid Cloud Network Services
- Infrastructure Resource Opimisation
- Application Performance Monitoring

Align
Strategy and Technology Architecture Advisory and Assessment Services

Transform
Solution Planning, Design and Implementation Services

Scale
On-going Solution and Platform Adoption, Optimisation and Delivery Services
